

Manual QA Testing Project – E-Commerce Web Application

Prepared from manually executed test observations

1. Project Overview

- Project: E-Commerce Web Application – Manual Testing
- Application used for practice: Sauce Demo
- Testing focus: Manual functional, validation, negative, navigation, cart, checkout and end-to-end testing.
- API/Postman testing is intentionally excluded from this version.

2. Project Objective

- To validate the major functional flows of an e-commerce web application and identify unexpected or potentially invalid input-handling behavior.
- Testing was performed by executing scenarios manually and recording expected results, actual results and status.

3. Scope of Testing

- Login and authentication validation
- Products page and product sorting
- Product details
- Add to Cart and Remove from Cart
- Cart navigation and multiple-product behavior
- Checkout information and validation
- Order total calculation
- Order completion
- Browser navigation/session behavior
- Negative and input-validation testing

4. Testing Types Performed

- Functional Testing
- Positive Testing
- Negative Testing
- Validation Testing
- UI Testing
- End-to-End Testing
- Boundary/Edge-Case Testing
- Navigation Testing
- Session Behavior Testing
- Business-rule validation

5. Test Execution Summary

ID	Scenario	Test Data / Action	Actual Result	Status
TC01	Valid login	Valid username and password	Products page opened successfully	PASS
TC02	Invalid password	standard_user + wrong123	Appropriate login error displayed	PASS
TC03	Empty username and password	Both blank	Username validation message displayed	PASS
TC04	Valid username + empty password	standard_user + blank	Password validation message displayed	PASS
TC05	Empty username + valid password	Blank + secret_sauce	Username validation message displayed	PASS
TC06	Products page verification	Successful login	Products, images, prices, Add to Cart and cart icon displayed	PASS
TC07	Name sorting Z-A	Z-A filter	Products sorted correctly in descending alphabetical order	PASS
TC08	Price sorting Low-High	Price low to high	Products sorted in ascending price order	PASS
TC09	Price sorting High-Low	Price high to low	Products sorted in descending price order	PASS
TC10	Name sorting A-Z	A-Z filter	Products sorted correctly in ascending alphabetical order	PASS
TC11	Add product to cart	Sauce Labs Backpack	Product added and displayed in cart	PASS
TC12	Remove product from cart	Backpack in cart	Product removed and cart became empty	PASS
TC13	Continue Shopping	Backpack in cart	Returned to Products page	PASS

TC14	Checkout information page	Backpack + Checkout	First Name, Last Name, Postal Code and action buttons displayed	PASS
TC15	Empty checkout form	All fields blank	First Name required validation	PASS

			displayed	
TC16	Missing last name	First Name entered; others blank	Last Name required validation displayed	PASS
TC17	Missing postal code	First and Last Name entered; postal blank	Postal Code required validation displayed	PASS
TC18	Valid checkout information	Huzaifa / Khan / 400001	Checkout overview displayed	PASS
TC19	Order total calculation	Item \$9.99 + Tax \$0.80	Displayed total \$10.79 matched calculation	PASS
TC20	Complete order	Valid checkout flow	Thank-you confirmation displayed	PASS
TC21	Back Home after order	Completed order	Returned to Products page	PASS
TC22	Session behavior after refresh	Logged-in page + refresh	Login page/session message observed	INVESTIGATE
TC23	Browser Back navigation	Products → browser Back	Returned to Cart page	PASS
TC24	Cart quantity control	Product in cart	No +/- quantity controls available	OBSERVATION
TC25	Product details	Sauce Labs Backpack	Product details and appropriate cart action displayed	PASS
TC26	Add/Remove from product details	Backpack	Remove then Add to Cart updated cart correctly	PASS
TC27	Cart/product consistency	Backpack in cart	Details showed Remove and cart contained product	PASS

TC28	Alphabetic postal code	abc	Accepted and proceeded to checkout	POTENTIAL DEFECT
TC29	Numeric postal code	123	Accepted and proceeded to checkout	PASS
TC30	Very long postal code	12345678901234567890	Accepted without validation error	POTENTIAL DEFECT
TC31	Numeric first name	12345	Accepted and proceeded to checkout	POTENTIAL DEFECT
TC32	Special characters in first name	@#\$\$%	Accepted and proceeded to checkout	POTENTIAL DEFECT
TC33	Numeric last name	12345	Accepted and proceeded to checkout	POTENTIAL DEFECT
TC34	Product/price consistency	Sauce Labs Bike Light	Product and price displayed consistently	PASS
TC35	Cart count for two products	Backpack + Bike Light	Cart count displayed 2	PASS
TC36	Multiple products in cart	Backpack + Bike Light	Both products displayed with correct prices	PASS
TC37	Remove one of multiple products	Remove Backpack	Bike Light remained in cart	PASS
TC38	Cart count after removal	2 → remove one	Cart count changed to 1	PASS

6. Potential Defect / Validation Findings

Postal Code accepts alphabetic input: Input: abc. Application accepted the value and proceeded to checkout. This is a potential defect only if the requirement requires numeric postal codes.

Postal Code accepts very long input: Input: 12345678901234567890. Application accepted it without a validation error. Maximum length requirement was not established.

First Name accepts numeric input: Input: 12345. Application accepted it. Potential validation issue if numeric-only names are not permitted.

First Name accepts special characters: Input: @#\$\$%. Application accepted it. Potential validation issue if special characters are not permitted.

Last Name accepts numeric input: Input: 12345. Application accepted it. Potential validation issue if numeric-only names are not permitted.

7. Session / Navigation Observation

During some navigation actions, returning to the Products page resulted in the message: “Epic sadface: You can only access '/inventory.html' when you are logged in.” The user had to log in again. This is recorded as an observation requiring requirement/session-behavior confirmation, not as a confirmed defect.

8. Test Summary

The executed testing covered the primary e-commerce flow from login through product selection, cart operations, checkout and order completion. Positive, negative and validation scenarios were exercised. Several input-validation behaviors were identified for further requirement-based investigation.

The project documentation intentionally does not claim unperformed API/Postman testing or unconfirmed defects.

9. Tools & Environment

- Web browser
- Sauce Demo test application
- Manual test execution
- Test-case documentation
